Android GPS, Location Manager Tutorial

Google Maps Android API : This is the default mapView in Android, and it uses the data from Google Maps. While the Google map application itself can be used in offline mode, as far as my knowledge goes, it is not possible to use Google Data in the offline mode. However it is possible to show your own tiles in offline mode.

GPS Programming in Android for Offline Maps - Trigent Vantage

Android devices are equipped with GPS hardware. Android provides a very straight forward API to access Location information derived from GPS hardware along with Wi-Fi and Cellular network connection sources that helps provide location information.

A GPS Location Plotting Android Application - CodeProject

Android has a built-in API called the Geocoder for looking up a user's address from his or her GPS coordinates (and vice versa). It's pretty simple to use. The only catch is that because it makes a network request to Google on the current thread, it's up to you to make sure you only run it on the background thread (so that you don't cause a hang on the main UI thread on slow networks).

Android App Development: How to Get Started with Location ...

Location user drivers allow your app to publish updates to the device's physical location through the Android location services . The API supports constellations of the Global Navigation Satellite System (GNSS), such as the Global Positioning System (GPS). GNSS modules are receive-only devices that triangulate signals from remote satellites in ...
